Flexibility in control – consistent in design – „Capio“ family provides iOS usage and two-factor authentication

At Lehmann Locks, family matters. Not only does this apply to the company but now to its products as well. Whereas „Verto“ unites mechanical and electronic locking solutions with drilling pattern consistency, the „Capio“ family brings together various control options for electronic locks that share the same design. In addition to the simple keypad, „Capio“ offers RFID reading functions for authentication on an M-series compatible lock which Lehmann also provides.

The new product family is based on the tried and proven „TA03“ keypad. In addition to the keypad, the newly developed „Capio TA03 RFID MIFARE“ also comes with an RFID reader. This gives users several ways of accessing a locker: either by entering a PIN code or by holding an RFID transponder or smartphone in front of it. The Lehmann transponder app works via NFC on Android and iOS devices.

“Two-in-one” solution for twice the security

The two control options combined in one product provide twice the security. In the „assigned use“ operating mode, „Capio TA03 RFID MIFARE“ enables two-factor authentication. To lock or open a locker, it is necessary to present an RFID transponder or smartphone as well as enter a PIN code – a feature that’s recommended when it comes to applications where security needs to be provided for items that are particularly worth protecting.

Completing the trio in the „Capio“ product family is a separate RFID reader which offers the same features as all of the familiar Lehmann RFID readers and supports both „MIFARE“ as well as „LEGIC“ technology.

Their outer appearance clearly shows that all three products belong together. Consistent product design with handle function provides an element of recognition and, together with the Lehmann-specific operating and configuration concept, enhances user friendliness. Given a broad range of colours for the various components, „Capio“ products can also be customised in any chosen way.
