Flexible waste management under the sink: Ninka is continuously expanding its range of waste bin systems

„One2seven“, „one2eight“, „one2nine“ – what sounds like a cleverly encrypted code describes the latest waste management systems from Ninka. With the combination of one or more containers and the alternative installation behind a hinged door or pull-out front, the specialist for plastic moulding & surface finishing offers a wide range that helps kitchen manufacturers to differentiate themselves. At Interzum 2025, Ninka will be presenting an expansion of the range in the form of new connections, containers and additional functions.

Specially developed for under-mounted drawer runners, „one2seven“ is a waste recycling system that allows several bin combinations and is very easy to clean thanks to its closed surfaces. While the system was previously only available for the „Legrabox“ from Blum, Ninka now also supports the concepts of various other drawer platforms. „one2seven“ adapts perfectly to the design of the respective drawer system.

With or without water treatment: „one2eight“ now also for pull-out fronts

Ninka has designed „one2eight“ for the combination of waste collection and water treatment system. The compact unit for 60 cm base units with an internal depth of at least 514 mm is mounted on the right or left side of the carcass and on the base, but can also be used as a freely positioned stand-alone solution with a second metal side. With its own decor panel, it remains independent of the hinged door. There is space next to it for either a water system or other utensils that need to remain within reach around the sink.

At Interzum, Ninka is presenting a second version of „one2eight“ for installation behind a pull-out front. Like the hinged door model, it is initially available in the 17 plus 8 litre container combination, but also as a duo of two 11.5 litre containers. Ninka supplies the suspended system as a complete set containing all components: the bins for dual waste separation and an optional organiser tray for the lid plate, which provides additional storage space for cleaning and washing utensils.

„One2nine“ – rethought classic with a new second container size

„One2nine“ is a classic yet new waste bin solution for use behind a hinged door. When the cabinet is opened, the lid lifts slightly and the bin rotates out of the cabinet thanks to a carrier attached to the door. In addition to the 17-litre bin, the system can now also be fitted with a 26-litre bin.

Both waste bins feature the usual Ninka quality: Robust and thick-walled, they reliably collect the waste and do not give way even when pushed down. Thanks to the glass-fibre reinforced handles, which also hold the bin liner in place, they are easy to remove from the holder, put back in place and transport even when fully loaded.

Ninka has designed all waste bin systems as compact units. Unlike accessories, they are considered fully integrated equipment. Listing them as standardised cabinets simplifies logistics and production.
