

Interzum, 20 - 23 May 2025

Multi-talented pivot and folding/slide-in hardware: Hawa demonstrated the installation of the “Concepta III” family

Single door furniture fronts, two-door furniture fronts and furniture fronts with even more doors, regardless of the height and width, with and without a separating wall, floor-to-ceiling and walk-in or for the composed cabinet, as a handle-less Push-to-open solution or for operating with a handle, inlaid or overlaid. “Hawa Concepta III” and “Hawa Folding Concepta III” are both versatile and customizable. At Interzum 2025 the focus is on the planning and installation of the latest generation of pivot and folding/slide-in hardware.

Convertible furniture fronts are all the rage. Hawa has developed the “Hawa Concepta III” hardware family in order to implement them. It is based on a well thought-out movement sequence: Pivoting, folding, sliding in at the side and disappearing in a space-saving way for free access. A gentle tap suffices to move the doors out, which can then be closed intuitively to form a large furniture front.

An entire world for the variant-rich design of kitchens, dressing rooms, utility rooms and home offices opens up on the basis of the two “Hawa Concepta III” and “Hawa Folding Concepta III” hardware systems.

Planning with the Hawa Configurator

Pivot and folding/slide-in fronts can be planned in just a few minutes using the Hawa Configurator. This leads to the individually required solution step by step. At the end, the digital assistant provides you with the correct hardware, including pre-cut dimensions, 2D construction drawings, 3D Step data and a parts list.

Fabricators may be interested in how quickly and intuitively the three components and 15 screws can be installed, and how adjustment is made easier by the logically positioned and easily accessible adjustment points. The hardware in the “Hawa Concepta III” family is pre-assembled to a considerable extent.

Caption: A look behind the scenes of the “Hawa Concepta III” hardware family reveals: Even complex movement sequences can be reduced to the essential for intuitive installation. When doing so, the systems for pivoting, folding and sliding in at the side remain flexible for use in a wide variety of furniture fronts. Planning assistance is available from a configurator.
